

Technoscience of Reproduction and Feminism

* Bhaswati Parasar

Abstract

With the rise of feminism, an explosion of explorations began into all possible areas that touched a woman's life. Reproduction and motherhood remained the primary concern for the feminists as the phenomenon touches the life of every woman so directly. Reproduction has become the most contested zone today with the technological intervention into the area as questioning on the situated knowledge of science and technology has taken place from a cultural stand point. This paper tries to capture these debates around techno science of reproduction and its inter-relationship with gender, society and culture.

Keywords: reproductive technology, feminism, artificial, natural and biological.
