

An analytical study on the role of cloud GIS in crime detection and control in India with special reference to crime against women.

* Shaikh Ahtesham Arif,** Ansari M. Nasir

Abstract

Crime detection and control is an enormous and continuous evaluation process. Today, technology has reached people beyond geographical, social and economical barrier. When compared to olden days we have ultra modern technologies. Use of technology in national security plays a pivotal role for both detection and control. Crime mapping is as old as crime itself; measuring statistics using software tools offers high degree of power and timely data. Cloud GIS help crime analyst in saving his efforts and time in quick researching, collecting and formatting statistical & strategic information.
