

## **A Study Of The Relationship Between Income And Education**

\*Neelam Yadav

### *Abstract*

*This research paper is based on the study of income and education, in Ghaziabad. The paper illustrated that how important the education is. It explored that whether factors other than education have any effects on income. The sample under consideration are working persons, a survey research using questionnaires was conducted to the chosen sample. I have done Quantitative analysis of the data to find the relationships between the variables. The analysis was performed using the Vassar Stats software package and Excel. Pearson correlation is the test undertaken.*

**Keywords:** Education Level, Earnings, Gender, Working Hours, Pearson correlation, Non-parametric Spearman's correlation
