Abstract

With the fast development of science and technology, innovative knowledge and high-tech development have become the world's economic development and nationally competitive high ground. With technological advancement learning methods has also been transformed from traditional learning into smart learning environment. Large data availability, information processing tools and techniques further created a new approach and exploration into teaching and learning. Expansion of educational technology framework, diversified content characteristics and huge volume of information availability further made the e-learning to spearhead the learning platform irrespective of technology constraints. This paper explores the stages of learning method from traditional learning to smart learning. How the Learning methods are transformed, to help students to be highly qualified specialists and innovative students.

Keywords: *Web based learning, M-learning, cloud base learning, adaptive and big data.*
